# Who Are We?

## Social Identity Theory in Campus Life

### 大学学术英语课堂展示 · 第 6 组配套演讲稿

成员：侍朗、曹席源、曾子恒、谭斐、王秋雨、邓尚轩、冀家毓

## 使用与排练

本稿为英文正式讲稿，逐页对应 PPT 第 1–15 页；第 16–17 页为参考文献。英文正文约 1,482 词，以每分钟 115–125 词讲述，连同停顿与开场思考约 12–14 分钟。若课堂将问答计入 15 分钟，请把问答控制在约 1 分钟，并提前计时排练。

中文提示和方括号说明仅供排练，不在课堂上朗读。PPT 备注中也已放入逐页英文讲稿。可由一人或多人汇报；交接时按页衔接即可。说明要求全体组员参与准备，但无需在首页展示分工。

| 对应页 | 内容 | 排练建议 |
| --- | --- | --- |
| 1–5 | 开场、目录、论点与理论框架 | 约 3–4 分钟 |
| 6–9 | 三个机制与经典研究证据 | 约 4 分钟 |
| 10–13 | 反思、英语学习与行动建议 | 约 4 分钟 |
| 14–15 | 结论与提问 | 约 1 分钟 |

## 制作条件核对

已围绕第 6 组对应的 Unit 3 Identity 展开；包含论点、解释与例证、研究依据和结论；PPT 正文以英文呈现，采用大字号、亮色背景、深色文字与统一青绿色点缀；封面显示第 6 组和七位成员姓名，无分工。使用 16:9 版式、可编辑文字与图形；未嵌入音视频。

准确性说明：校园案例均为情境示例，不是本组调查；不使用无来源的比例或专业排名；语言学习身份研究属于延伸，不能当作 SIT 实验结论。未提供教材原文，因此不使用虚构的教材直接引语。

## 01 Who Are We?

参考时间轴 00:00–00:22 · 约 43 词 · 按 120 词/分钟估算

中文提示：开场介绍第 6 组与主题；看向观众，不逐一朗读成员姓名。

Good morning, everyone. We are Group Six. Our topic is “Who Are We? Social Identity Theory in Campus Life.” We will explore how everyday campus labels influence our sense of belonging, our judgments of other people, and even our willingness to speak English.

## 02 Presentation Overview

参考时间轴 00:22–00:44 · 约 44 词 · 按 120 词/分钟估算

中文提示：目录页用约 20–25 秒交代四个部分；无需逐项朗读页码。目录标题可点击跳转到相应内容。

Here is our plan. First, we introduce campus labels and Social Identity Theory. Next, we explain three mechanisms using campus examples and research evidence. We then reflect on labels and English learning. Finally, we offer practical suggestions, summarize our argument, and invite your questions.

## 03 Which label comes first?

参考时间轴 00:44–01:48 · 约 108 词 · 按 120 词/分钟估算

中文提示：让同学回想一个校园标签，停顿约 10 秒；无需逐个收集答案。

[Pause for about 10 seconds after the opening question.]

Think back to your first week at university. Did you describe someone as an introvert, a local student, or a member of a particular major? Please take a few seconds to think of one label you used.

These labels can make an unfamiliar campus easier to understand. A familiar accent may start a conversation. A shared interest may lead to a friendship. However, a label can also become a judgment before we know the person. Calling someone quiet, for example, may lead us to assume that they have nothing to contribute. Our question today is: how does this movement from a simple label to a social judgment happen?

## 04 Part of “I” comes from “we”

参考时间轴 01:48–02:52 · 约 129 词 · 按 120 词/分钟估算

中文提示：明确中心论点；part of 不读成 half；说明理论不是解释一切的唯一原因。

Our central argument is that group identities shape how we see ourselves and others. They can support belonging, but they can also narrow our judgments.

Social Identity Theory, developed by Henri Tajfel and John Turner, provides a useful explanation. Social identity refers to the part of our self-concept connected with valued group memberships. We may think of ourselves as university students, automation students, or members of a club.

The important point is that identity includes both personal qualities and social relationships. The theory does not assign a fixed percentage to either part. It also does not suggest that groups explain every decision. Instead, it helps us examine situations in which membership becomes meaningful. This connects directly with Unit Three’s question about biased and unbiased views of ourselves and strangers.

## 05 Three mechanisms, one campus

参考时间轴 02:52–03:42 · 约 101 词 · 按 120 词/分钟估算

中文提示：依次指向三个机制；强调这是便于理解的框架，不是严格的时间顺序。

We will use three connected mechanisms: social categorization, social identification, and social comparison.

Categorization asks, “Which group do I place this person in?” Identification asks, “What does belonging to this group mean to me?” Comparison asks, “How does our group compare with another group?”

These are useful analytical distinctions, rather than three steps that always happen in a fixed order. In everyday life, they may overlap. To make them clear, we will examine three familiar campus situations: hearing a hometown accent, joining a running group, and comparing university majors. These are illustrative scenarios, not results from a survey of our classmates.

## 06 01 Categorization

参考时间轴 03:42–04:45 · 约 125 词 · 按 120 词/分钟估算

中文提示：讲徐州口音案例；把“分类”与“偏见”区分开，不暗示同乡必然互相偏袒。

Imagine that it is your first day on campus. You hear another student speaking with a familiar Xuzhou accent. Before you know their name, you think, “We come from the same place.” A small linguistic cue has created a possible boundary between “us” and “them.”

This is social categorization: organizing people through group labels. It can help us begin a conversation and find common ground. Yet the accent tells us little about the person’s interests, ability, or character.

Categorization is not the same as prejudice. The problem begins when we treat the category as enough evidence to judge an individual. A useful shortcut can then hide important differences within a group. To see why even simple boundaries matter, let us turn to a classic experiment.

## 07 Evidence: even small boundaries matter

参考时间轴 04:45–05:45 · 约 121 词 · 按 120 词/分钟估算

中文提示：指向实验示意流程；这是文献结果，不是本组实验，也不代表每个人都会歧视。

Tajfel and his colleagues published a classic study in 1971. In its minimal group setting, participants were separated on relatively trivial grounds and then distributed rewards between group members. Participants showed favoritism toward their own group, although prior hostility was not needed to create the situation.

This finding supports a limited but important claim: a simple group boundary can influence a decision. It does not prove that every label causes discrimination, or that all people respond in the same way. A controlled experiment also cannot reproduce every feature of university life.

For our discussion, the lesson is to question an automatic preference for “people like us.” Shared membership can feel meaningful even when we have very little information about the individuals involved.

## 08 02 Identification

参考时间轴 05:45–06:46 · 约 123 词 · 按 120 词/分钟估算

中文提示：用跑步群案例解释规范内化；使用 may/can，避免“加入群必然改变行为”。

Now imagine joining a campus running group. At first, your aim is simply to try something new. Later, you begin to think, “I am one of the runners.” Regular practice may then feel like part of who you are, rather than just another task.

This illustrates social identification. When a membership matters to us, the group’s expectations can become personal standards. Work on the broader social identity approach also examines how shared identity relates to social influence.

The effect can be helpful: a supportive group may encourage exercise or study. However, influence can also create pressure when members feel unable to question unhealthy expectations. In this scenario, the key change is from joining an activity to identifying with the people who do it.

## 09 03 Comparison

参考时间轴 06:46–07:45 · 约 118 词 · 按 120 词/分钟估算

中文提示：专业优越感是虚构学生言论；不把它讲成就业事实或真实专业排名。

During exam week, imagine a student saying, “Our major is more practical than theirs.” This is a hypothetical student claim, not evidence about the quality of any major.

The statement illustrates social comparison. We may select a comparison that presents our own group positively. That positive view can become part of how we value ourselves. This connects with self-enhancement: the tendency to view the self favorably.

There is a difference between taking pride in our work and assuming that other groups are inferior. A fair comparison needs a clear criterion and relevant evidence. Without them, a comforting group story can become an unsupported ranking. Our question should therefore be, “Better in what respect, and based on what evidence?”

## 10 Belonging has a boundary

参考时间轴 07:45–08:39 · 约 108 词 · 按 120 词/分钟估算

中文提示：左右对应讲好处与风险；避免把群体认同描述为天然有害。

Taken together, these mechanisms help explain why group life can feel both supportive and restrictive.

On the positive side, membership may provide belonging, encouragement, and shared purpose. A new student can feel less isolated when they find people with similar interests. On the negative side, the same boundary may encourage exclusion, pressure to conform, or stereotypes about outsiders.

These outcomes are possibilities, not unavoidable consequences. The meaning of a group and the way its members behave both matter. We can value our own community while remaining curious about others. The practical challenge is to keep the support that identity offers while questioning judgments that membership alone cannot justify.

## 11 A label is a starting point

参考时间轴 08:39–09:36 · 约 114 词 · 按 120 词/分钟估算

中文提示：安静是行为描述，不能直接推断能力；这不是对社交焦虑的临床解释。

Consider a quiet classmate. If we immediately label them “not a speaker,” we may stop inviting them to contribute. Yet the student might be an excellent listener, a careful researcher, or simply unfamiliar with the discussion topic.

This example shows why individual information matters. Being quiet in one setting does not establish someone’s ability in every setting. Similarly, being a non-local student does not mean that someone must remain an outsider.

Instead of asking only, “What type of person are you?”, we can ask, “What are you interested in?” and “What would help you participate?” These questions allow an identity to develop through interaction, rather than treating a first impression as a final definition.

## 12 From English learner to English user

参考时间轴 09:36–10:32 · 约 111 词 · 按 120 词/分钟估算

中文提示：说明这里借助语言学习身份研究作延伸，不把它说成 SIT 实验结论；词汇和练习仍重要。

There is also a connection with our English classroom. In related language-learning research, Bonny Norton Peirce examined identity and investment among immigrant women in Canada. Her work highlights how social relationships can shape opportunities to use a language. This extends our discussion beyond Social Identity Theory itself.

For a campus example, compare “I am only a learner” with “I can use English to contribute an idea.” A student might take one small step by asking a question in English or joining a discussion. This does not replace vocabulary, practice, or feedback. It adds an identity question: do I see myself, and am I recognized by others, as someone who can participate?

## 13 Three habits for a wider “we”

参考时间轴 10:32–11:27 · 约 110 词 · 按 120 词/分钟估算

中文提示：行动建议属于本组分析，不声称是经过验证的干预；每项给一个具体做法。

Based on this analysis, we suggest three everyday habits.

First, notice the label. Before judging someone, identify the category you are using and ask what you actually know about the individual.

Second, seek another connection. A student from a different hometown may share your interest in music, sport, or technology. One boundary does not describe the whole relationship.

Third, make participation possible. Invite a quiet classmate to share an idea, or create a supportive chance to speak English. These are practical suggestions from our discussion, rather than a tested intervention. Their purpose is to help us build belonging without demanding that everyone fit a single narrow image of the group.

## 14 Identity is also about “we”

参考时间轴 11:27–12:15 · 约 97 词 · 按 120 词/分钟估算

中文提示：回扣中心论点和三个机制；末句放慢语速，停顿后切至提问页。

Let us return to our main argument. Group identities can shape how we see ourselves and other people. Categorization organizes the social world. Identification makes membership personally meaningful. Comparison can give our group a positive position.

These processes help explain both the value of belonging and the risk of unfair judgment. Recognizing them gives us a chance to examine the groups we join and the assumptions we make. We are more than the first label someone gives us. Identity is not only about “I”; it is also about “we,” and the boundaries of that “we” can change.

# 15 Which label would you rethink?

参考时间轴 12:15–12:30 · 约 30 词 · 按 120 词/分钟估算

中文提示：感谢后邀请一个简短回答或提问；若课堂总时长上限 15 分钟，控制问答约 1 分钟。

Thank you for listening. Before we finish, which campus label would you now rethink, and what would you want to know about the person behind it? We welcome your questions.

# Questions & suggested answers

以下为备用问答，不计入英文主稿词数；回答后可回到 PPT 参考文献页。

## 1. Is categorization always harmful?

No. It helps us organize information and find common ground. The risk arises when we use a category as sufficient evidence to judge an individual.

中文提示：分类有认知便利；不能只凭类别判断个人。

## 2. Does Social Identity Theory explain every choice?

No. It is especially useful when group membership is meaningful. Personal goals, relationships, institutions, and other factors also influence behavior.

中文提示：说明适用范围，避免用单一理论解释一切。

## 3. Are the campus stories based on your own survey?

No. They are illustrative scenarios used to explain the concepts. The research evidence comes from the cited publications. We did not conduct a campus survey.

中文提示：明确区分情境示例与文献证据。

## 4. How is social identity different from personality?

Personality concerns characteristic patterns of thinking, feeling, and behaving. Social identity concerns how meaningful group memberships enter our self-concept. Both can matter in the same situation.

中文提示：人格倾向与群体身份是不同分析角度。

## 5. Is the running-group example only about peer pressure?

Peer pressure may be part of it. Our example focuses on the possibility that a valued group membership makes its norms personally meaningful. The scenario does not establish a single cause.

中文提示：承认其他解释，不用故事证明因果。

## 6. Can identity alone improve our English?

No. Language development still requires practice, knowledge, and feedback. A more inclusive identity may support participation, but it does not replace learning.

中文提示：身份可能支持参与，但不能取代知识与练习。

# Key terms & rehearsal

| 术语 | 中文理解 | 朗读重音提示 |
| --- | --- | --- |
| **social identity** | 社会身份；有意义的群体归属进入自我概念 | social i-DEN-ti-ty |
| **categorization** | 社会分类 | cate-go-ri-ZA-tion |
| **identification** | 社会认同 | i-den-ti-fi-CA-tion |
| **social comparison** | 社会比较 | com-PAR-i-son |
| **ingroup / outgroup** | 内群体 / 外群体 | IN-group / OUT-group |
| **self-enhancement** | 自我提升倾向；倾向积极看待自我 | self en-HANCE-ment |
| **stereotype** | 刻板印象 | STE-re-o-type |
| **investment** | 语言学习中的投入；与身份及参与机会相关 | in-VEST-ment |

## 排练顺序

先理解三个机制的区别，再用英文完整讲一遍并计时。每页记住一个核心句和一个例子，避免照读 PPT。介绍研究时交代“研究者发现什么”和“不能推出什么”。讲专业比较时明确是虚构言论，讲英语身份时强调练习与反馈仍然重要。

讲稿是连贯叙述稿，不预设成员的具体分工。若多人上台，交接前说完本页最后一句，下一位从下一页第一句继续。时间不足时优先缩短开场互动和问答，保留论点、研究证据、三个机制及结论。
